

EDUCATION

International Institute of Information Technology (IIIT-H), Hyderabad, India
Bachelor of Technology in Computer Science and Engineering

September 2020 - Present
GPA: 8.68/10

PROJECTS

Shell

- Created a Linux shell from scratch using C
- Added functionality for most commonly used commands (cd, ls, etc.), along with support for foreground and background processes and signals

xv6 OS

- Tweaked the xv6 operating system by adding system calls - one to trace the systems calls made by a command, another to change the priority of a process
- Added two new schedulers - First Come First Served (FCFS) and Priority Based Scheduling (PBS)

Bitcoin Simulator

- Designed a bitcoin simulator using C (group project - 5 people)
- Simulator supports multiple users, with transactions being stored as a blockchain, complete with hashing for security and verification.

Algorithms Website

- Created a website as a guide to algorithms for beginners using HTML, CSS, and JavaScript

Parliament Database

- Implemented a miniature database based on the Indian Parliament System using MySQL and Python (group project - 3 people)
- Added functionality for common DBMS operations, while also handling relations between the tables so as to properly simulate a parliamentary system

Card game

- Designed a card game called 99 using C++
- Game is played by a single user against the computer. Added full functionality for the computer to take the best possible move at each step

TECHNICAL SKILLS AND RELEVANT COURSES

Programming Languages: C, C++, Python, HTML, CSS, JavaScript, SQL, Bash

Relevant Courses: Data Structures and Algorithms, Computer Systems Organization, Algorithm Analysis and Design, Operating Systems and Networks, Data and Applications
